NEBRASKA.

PEOPLE WILL TALK.

You may get through the work, but 'twill be very slow.

If you are all that is said as you go, you'll be worried, and fretted, and kept in a stew.

For people will talk.

If you are all that is said as you go, you'll be worried, and fretted, and kept in a stew.

For people will talk.

If you are all that is said as you go, you'll be worried, and fretted, and kept in a stew.

For people will talk.

Premises to Marry.

A suit for breach of promise of marriage has been filed in the county court.

John Faulkner, a bachelor, owning property to the amount of forty or fifty thousand dollars, promised to marry Mrs. John Tilton, a widow whose husband had been one of his tenants, and a written memorandum of his agreement was drawn up and a day set for the ceremony.

Very soon, however, Faulkner seems to have repented of his step, and when the day appointed for the marriage arrived, he was not ready to proceed, and the ceremony had to be postponed.

He was always unprepared to enter matrimony when the decisive moment arrived, but Mrs. Tilton was always ready, and clung to him patiently.

Finally, he seems to have struck upon the idea of treating her in such a rude and insulting manner in the presence of other persons that it would be impossible for her to submit to it without degradation.

She continued her efforts to bring the marriage to a happy conclusion, but he refused to do so, and she became dazed when she was told that he had refused to do so.

She was from eight to ten feet in length. One fine specimen was found weathered out by the wind and rain, and was found in the hands of the Solomon River, Kansas.

Numerous other species were found in the desert tracts, near Fort Wallace, Kansas, on the shore of the Arkansas river, and that once was there. What is the largest fossil fish known?

The sharks of the tertiary period are probably the largest. Some of them were possibly one meter long, and fifty feet high. I have some of their teeth in my collection that are as perfect as when they were in the fish, and the enamel is as rich as ever.

Some of the teeth are as large as your outstretched hand.

But how do you know they were a hundred and fifty feet long?

By a very simple calculation. Take the jaw of one of the allied sharks of today—the car-barras—as a model, and arrange these fossil teeth in seven or eight rows in an imaginary jaw, or one of plaster, and you will find that the jaw is long enough to hold several men, and to give it a proportionate length will require the number of feet mentioned in all likelihood.

A fine collection of fossil fishes, the best in the city, and probably in the country, is owned by Dr. Newbury, of Columbia College, and the large sharks' teeth can be seen at the Museum in Central Park, New York.

At the College of Physicians and Surgeons, London, in describing a specimen of medium size, says: "The length of the base of this tooth from the coronoid angle to the longest of its four inches eight lines; that of the longest of its sides, five inches ten lines; with it is placed a tooth of an unusually large size, which has been known to occur in the fossiliferous strata of the tertiary period, and which is one inch eight lines, and that of the longest of its sides two inches three lines. This tooth is from a shark, although the fossiliferous strata are of the tertiary period, and the fossil shark, if bearing the same proportion to the teeth, must have been over sixty feet long."

The fossil tooth was from the tertiary period, and was found in the tertiary strata of the tertiary period, and was found in the tertiary strata of the tertiary period.

How many drinks in a gallon of water?

Franks at Cook's Fair.

"What a beautifully arranged table and what handsome articles," remarked the lady who had just entered the room.

"No, of course not," I tell you it's a beautiful table, and the fair is a town charmer. The table contained a fine array of fancy articles. There were silver-mounted hand-glasses, carved mother-of-pearl, jewelry and other goods.

"How the ladies in charge must have worked to get so many nice things contributed."

"What a marked contrast this table presents to the one at the other," said the gentleman. "It will bring the couple quite a fund by itself."

"You must excuse me, but I cannot help setting you right on the subject about which you were just speaking."

"That table which you admire, and that one which you despise, are both what is called a commission table, and will not obtain for the church as much money as many of the planer ones."

"The goods are offered on regular basis, and sold at the current price. What are sold are paid for, and what are not sold are returned. All that the church receives is the commission given for the goods sold."

"But you frequently do not exceed ten per cent. From this you can easily see that a commission table would not be a profitable one."

"I have seen sparks flying from my hair when the wire was heavily charged, and when the spark was taken down it would not be so hot as when it was taken down in the open air."

"There is one duty pole-climbers are called upon to perform which is hazardous in the extreme, and that is climbing among the wires during a thunder-storm, when steel-told lightning is manœuvring about in the air."
